AMEEN NIZAR

Data Science Aspirant | Machine Learning Engineer | Data Analytics | Python | SQL | Automation | n8n | ML Engineer | NLP

+966 571773953 | ameennizar0818@gmail.com | Saudi Arabia

SUMMARY

B.Tech Computer Science graduate (2026) growing into a Data Scientist role, skilled in Python, SQL, machine learning, and Power BI, and now advancing into deep learning, neural networks, and LLM-based AI automation. Built and deployed an end-to-end ML model (scikit-learn, FastAPI) and delivered analytics dashboards on real-world datasets. Data Science Intern at Luminar Technolab, India, seeking entry-level Data Scientist, Junior ML Engineer, or Data Analyst roles.

SKILLS

Machine Learning: scikit-learn, Pandas, NumPy, feature engineering, model evaluation, EDA, cross validation
NLP: text preprocessing, tokenization, TF-IDF, text classification, [spaCy / NLTK]
Cloud: AWS (S3, EC2, IAM, [Lambda / SageMaker]), cloud deployment fundamentals
MLOps & Infrastructure: Docker, Git/GitHub, Github Actions, Render
Backend & Data Stores: FastAPI, Supabase, PostgreSQL, SQL
Automation & Integration: n8n, REST APIs, webhooks, AI Automation
Analytics: Power BI, DAX, Power Query, Matplotlib, Seaborn
Languages: Python, SQL

EXPERIENCE

Data Science Intern, Luminar Technolab *May 2026 - Present*

- Built end-to-end ML projects in Python (Pandas, NumPy, scikit-learn), covering data cleaning, EDA, feature engineering and model evaluation.
- Developed and deployed **NightStay**, a room type classifier on NYC Airbnb data, served through a FastAPI endpoint with Pydantic validation and hosted on Render.
- Designed a 9-page Power BI report on the Olist e-commerce dataset (PostgreSQL, DAX, Power Query) tracking revenue, AOV, on-time delivery % and customer ratings.
- Ran a Power BI analytics project for a retail grocery business, combining sales, credit and expense data into weekly profit and loss reporting.

Freelance Automation Developer *Jan 2026 –March 2026*

- Built an end-to-end **lead validation and email management pipeline** in n8n, integrating Gmail, Supabase, Google Drive, Notion, Telegram and enrichment APIs to replace manual lead checking and inbox handling.
- **Lead validation:** Enriched incoming leads through external APIs and filtered duplicate, incomplete and invalid records.
- **Semantic search:** Stored email and document embeddings (Gemini, 3072 dimensions) in Supabase pgvector to retrieve past conversations and files by meaning rather than keyword.
- **Human-in-the-loop approval:** Designed a two-workflow setup where drafted replies go to Telegram for approval, with Google Sheets as the handoff layer, so nothing is sent without sign-off.
- Handled the full lifecycle from requirements and design to testing, deployment and documentation.

PROJECTS

NightStay: ML-Powered Airbnb Room Type Classifier

- Trained a scikit-learn model that predicts NYC Airbnb room type with class probabilities from location, price, reviews and availability, reaching 88% Accuracy.
- Served it through a FastAPI backend with Pydantic validation and a custom frontend, live on Render.

Breast Ultrasound Cancer Classifier

- Fine-tuned a pretrained **ResNet50** on the BUSI ultrasound dataset (780 images, 3 classes) to detect benign and malignant tumors, improving accuracy from [65]% (Random Forest baseline) to [88]%.

- Addressed class imbalance with **weighted cross-entropy**, stratified splits and augmentation; evaluated with F1, recall and a confusion matrix, prioritizing malignant-class recall.
- Tracked 210 experiments with **MLflow** (learning rate, epochs, augmentation settings) to select the best model.

PDF Question-Answering Chatbot

- Built a **RAG chatbot** that answers questions from PDFs: chunked text (500 chars, 50 overlap), generated embeddings with **MiniLM**, and stored vectors in **pgvector on Neon**.
- Retrieved the top 4 chunks by cosine similarity and generated source-cited answers with [LLM], with a fallback response when the answer is not in the document.
- Evaluated on [40] labeled questions: [85]% retrieval hit rate and [78]% answer correctness; served via **FastAPI** and deployed on Render.

E-Commerce Analytics Dashboard: PostgreSQL & Power BI (Olist)

- Designed a normalized PostgreSQL schema and a 9-page Power BI dashboard covering sales, delivery, reviews, payments and seller performance.
- Built DAX measures for revenue, AOV and on-time delivery rate, with drillthrough pages for category analysis.

EDUCATION

Bachelor Of Technology, Computer Science & Engineering *Graduated 2026*

Rajadhani Institute of Science and Technology, Kollam, Kerala | CGPA: [6.9 / 10]

CERTIFICATIONS

SQL (HackerRank, 2026) · Python (HackerRank, 2026)
